

Visualising numerical data

Data Science in a Box

datasciencebox.org

Terminology

Number of variables involved

- Univariate data analysis - distribution of single variable
- Bivariate data analysis - relationship between two variables
- Multivariate data analysis - relationship between many variables at once, usually focusing on the relationship between two while conditioning for others

Types of variables

- **Numerical variables** can be classified as **continuous** or **discrete** based on whether or not the variable can take on an infinite number of values or only non-negative whole numbers, respectively.
- If the variable is **categorical**, we can determine if it is **ordinal** based on whether or not the levels have a natural ordering.

Data

Data: Lending Club

- Thousands of loans made through the Lending Club, which is a platform that allows individuals to lend to other individuals
- Not all loans are created equal -- ease of getting a loan depends on (apparent) ability to pay back the loan
- Data includes loans *made*, these are not loan applications

Take a peek at data

```
library(openintro)
glimpse(loans_full_schema)
```

```
## Rows: 10,000

```

Selected variables

variable	description
loan_amount	Amount of the loan received, in US dollars
interest_rate	Interest rate on the loan, in an annual percentage
term	The length of the loan, which is always set as a whole number of months
grade	Loan grade, which takes a values A through G and represents the quality of the loan and its likelihood of being repaid
state	US state where the borrower resides
annual_income	Borrower's annual income, including any second income, in US dollars
homeownership	Indicates whether the person owns, owns but has a mortgage, or rents
debt_to_income	Debt-to-income ratio

Variable types

variable	type
loan_amount	numerical, continuous
interest_rate	numerical, continuous
term	numerical, discrete
grade	categorical, ordinal
state	categorical, not ordinal
annual_income	numerical, continuous
homeownership	categorical, not ordinal
debt_to_income	numerical, continuous

Visualizing numerical data

Describing shapes of numerical distributions

- shape:
 - skewness: right-skewed, left-skewed, symmetric (skew is to the side of the longer tail)
 - modality: unimodal, bimodal, multimodal, uniform
- center: mean (`mean`), median (`median`), mode (not always useful)
- spread: range (`range`), standard deviation (`sd`), inter-quartile range (`IQR`)
- unusual observations

Histogram

Histogram

```
ggplot(loans, aes(x = loan_amount)) +  
  geom_histogram()
```

```
## `stat_bin()` using `bins = 30`. Pick better value with  
## `binwidth`.
```

Histograms and binwidth

binwidth = 1000

binwidth = 5000

binwidth = 20000

```
ggplot(loans, aes(x = loan_amount)) +  
  geom_histogram(binwidth = 1000)
```

Histograms and binwidth

binwidth = 1000

binwidth = 5000

binwidth = 20000

```
ggplot(loans, aes(x = loan_amount)) +  
  geom_histogram(binwidth = 5000)
```

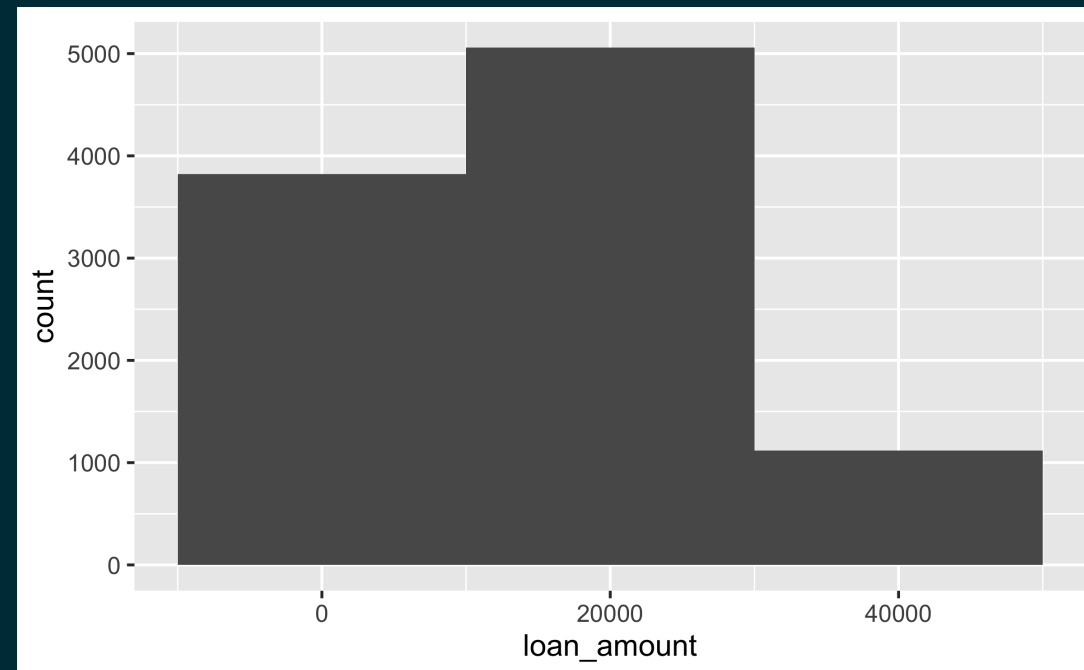

Histograms and binwidth

binwidth = 1000

binwidth = 5000

binwidth = 20000

```
ggplot(loans, aes(x = loan_amount)) +  
  geom_histogram(binwidth = 20000)
```

Customizing histograms

Plot

Code

Customizing histograms

Plot

Code

```
ggplot(loans, aes(x = loan_amount)) +  
  geom_histogram(binwidth = 5000) +  
  labs(  
    x = "Loan amount ($)",  
    y = "Frequency",  
    title = "Amounts of Lending Club loans"  
  )
```

Fill with a categorical variable

Plot

Code

Fill with a categorical variable

Plot

Code

```
ggplot(loans, aes(x = loan_amount,  
                  fill = homeownership)) +  
  geom_histogram(binwidth = 5000,  
                 alpha = 0.5) +  
  labs(  
    x = "Loan amount ($)",  
    y = "Frequency",  
    title = "Amounts of Lending Club loans"  
  )
```

    y = "Density",  
    title = "Amounts of Lending Club loans",  
    fill = "Homeownership"  
  )
```

Box plot

Box plot

```
ggplot(loans, aes(x = interest_rate)) +  
  geom_boxplot()
```

Box plot and outliers

```
ggplot(loans, aes(x = annual_income)) +  
  geom_boxplot()
```

Customizing box plots

Plot

Code

Interest rates of Lending Club loans

Customizing box plots

Plot

Code

```
ggplot(loans, aes(x = interest_rate)) +  
  geom_boxplot() +  
  labs(  
    x = "Interest rate (%)",  
    y = NULL,  
    title = "Interest rates of Lending Club loans"  
  ) +  
  theme(  
    axis.ticks.y = element_blank(),  
    axis.text.y = element_blank()  
  )
```

Adding a categorical variable

Plot

Code

Adding a categorical variable

Plot

Code

```
ggplot(loans, aes(x = interest_rate,  
                  y = grade)) +  
  geom_boxplot() +  
  labs(  
    x = "Interest rate (%)",  
    y = "Grade",  
    title = "Interest rates of Lending Club loans",  
    subtitle = "by grade of loan"  
  )
```

Relationships numerical variables

Scatterplot

```
ggplot(loans, aes(x = debt_to_income, y = interest_rate)) +  
  geom_point()
```

Hex plot

```
ggplot(loans, aes(x = debt_to_income, y = interest_rate)) +  
  geom_hex()
```

Hex plot

```
ggplot(loans %>% filter(debt_to_income < 100),  
       aes(x = debt_to_income, y = interest_rate)) +  
  geom_hex()
```
